

PID temperature and humidity microprocessor controllers.

High contrast lighting display, with 5 physical buttons for menu navigation. It displays the selected setpoint and the real time values.

The two controllers work separately with accurate control of humidity and temperature.

You can change the preset setpoint directly from the display.

You can turn the auto-tuning option, which allows the controller to automatically optimize the PID control.

Technical data

Temperature Regulation Step -> 0.1°C
Humidity Regulation Step -> 1%
High contrast LCD display
User friendly and easy to use
Adjustable heating and cooling rate
Overview of set and current parameters while operating
Auto-tuning function
Accurate and reliable PID control
Audible and visual alarms of: setpoint parameters
Possibility of parameters calibration by the User
Password protected settings
1x RS232C/RS485 port interface
